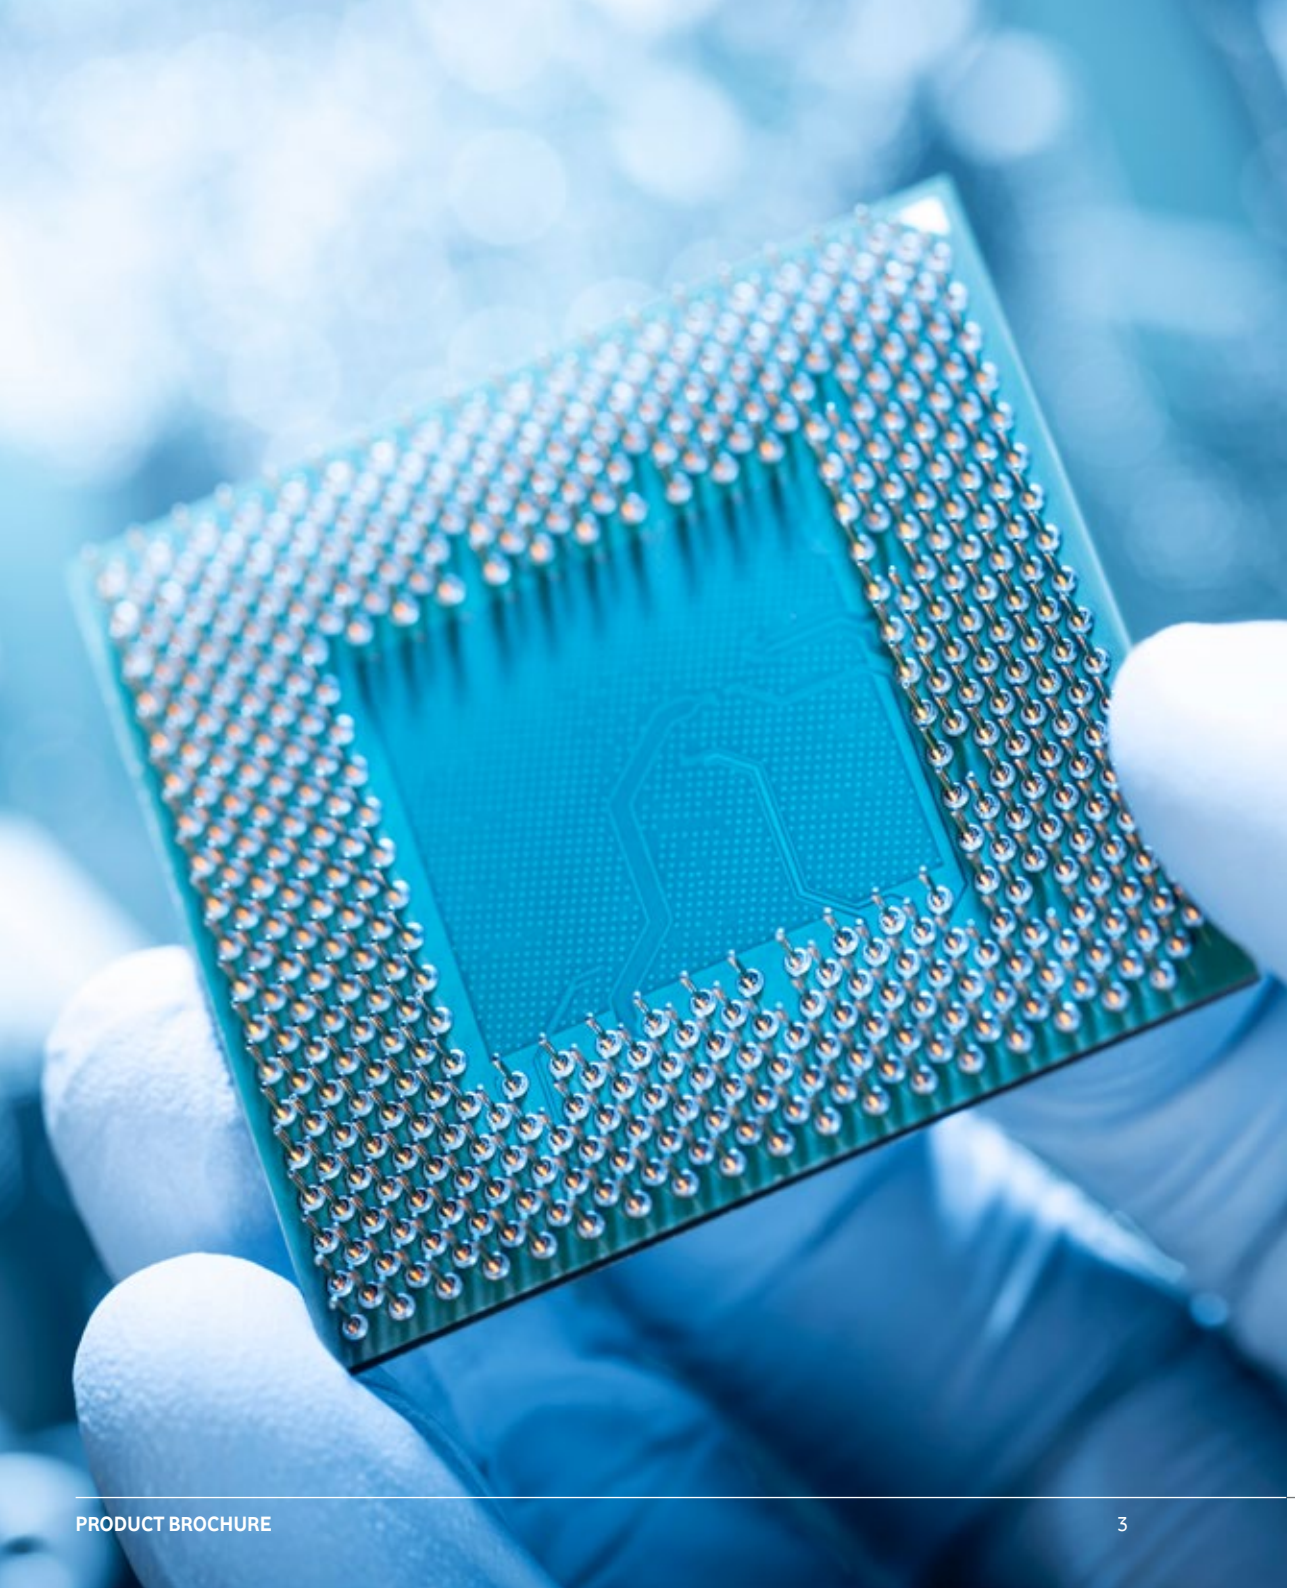
What is the Design and Configuration of Cloud Environments?

What's in it for you?

What's included in the Design and Configuration of Cloud Environments?

Why Vodafone?



What is the Design and Configuration of Cloud Environments?

Design and Configuration of Cloud Environments provides you with a fully configured development, test and production cloud environment (landing zone), suitable for the building and deployment of workloads into private clouds (VMware, IBM Private Cloud) or public clouds (AWS, Azure, GCP or Alibaba). These cloud environments will be suitable for hosting and scaling multiple applications.

What is the service?

This service ensures that the configuration and design phase of your cloud rollout is delivered to meet the business deadlines. Project leaders and cloud consultants deliver the environments accompanied by:

- Environmental requirements
- Cloud environment HLD
- Foundation setup: a formation template for landing zone creation
- Compute deployment setup: a formation template for the creation of the IaaS instances and PaaS services identified in the HLD
- Cloud security review
- Access to an MVP landing zone
- Delivery status report

What do you use it for?

Many organisation understand the need to move to the cloud, but they often have concerns with it. Our solution solves a number of those concerns and provides the design and configuration of development, test and production environments that are suitable for hosting and scaling multiple applications. This will support your cloud journey when you:

- Lack the necessary skills, time and resource to design and configure multiple private and public cloud environments and struggle to integrate them into existing environments
- Lack standardised, repeatable, secure cloud deployments that slow down delivery and hinder ability to hit business goals
- Have a number of non-standardised cloud deployments which create risk against businesses' compliance and security policies

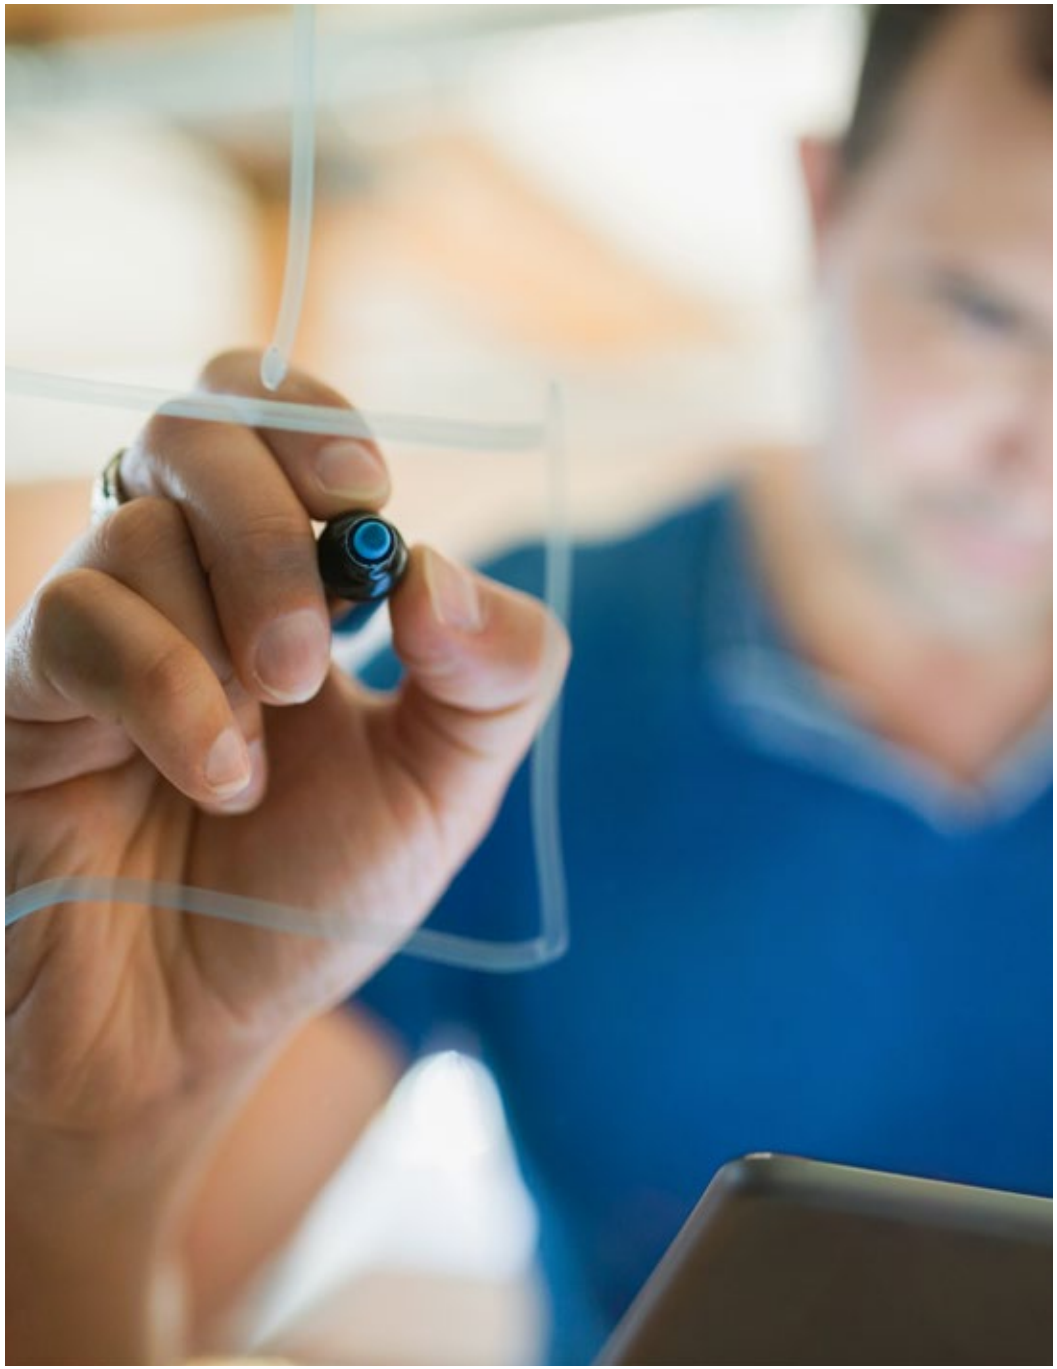
What’s in it for you?

- Tried and tested methodology accelerating delivery and reducing risk
- Rapidly delivers a configured, secure landing zone to migrate applications into

What's included in Design and Configuration of Cloud Environments?

We will provide the subject matter experts to deliver the cloud environments. They will carry out the following activities:

- Carry out a Cloud Environment Readiness Assessment based on the output from an Application Assessment which you will have completed prior to using this service
- Select a public or private cloud type for hosting
- Configure the environments
- Configure your cloud environment connectivity
- Proceed with automated testing and validate the environment setup and sign off
- Produce a report of the various configurations
- Conduct a handover session



Why Vodafone?

Vodafone Group is one of the world's largest telecommunications companies and provides a range of services including voice, messaging, data and fixed communications. Vodafone Group has mobile operations in 25 countries, partners with mobile networks in 42 more and fixed broadband operations in 19 markets. As of 31 December 2018, Vodafone Group had approximately 700 million mobile customers and 21 million fixed broadband customers, including all of the customers in Vodafone's joint ventures and associates.

By connecting people, places and things, Vodafone Business helps businesses of all sizes to succeed in a digital world. Our expertise in connectivity, together with our leading IoT platform, multi-cloud solutions, digital services and global scale, delivers the results customers need to help them progress and thrive. We are a trusted partner to businesses of all sectors and public services around the world, and work side by side with them to understand the unique challenges they face and the goals they want to achieve.
