E102 Series Enterprise Router

2022 - 11 -02

The Cradlepoint NetCloud Service with the E102 Series Router is ideally suited for enabling mission-critical employees to work from home or outside the office with the same services, security, and ease of management. The portable, compact form factor includes full-featured routing, security, traffic shaping, and Wi-Fi, making it easy to connect and maintain connectivity to the Internet for supporting crucial business applications. The embedded LTE modem means that reliable, private connectivity is always available from day one without waiting for a wired connection and without having to depend upon consumer-class, underlying networking conditions.

Ideal for Work from Anywhere

NetCloud Service, combined with the E102 Series Router, provides a dedicated connection for remote, mission-critical workers and executives with a similar experience as the office network, with access to critical cloud and corporate data center applications. Instead of relying on uneven levels of household equipment, this Work from Anywhere (WFX) solution offers IT providers cloud-based management to define and distribute policies, set security parameters, isolate corporate assets, and fine-tune bandwidth considerations in a uniform, corporate-class offering that interoperates with existing network solutions.

Dedicated Enterprise Network

By using a resilient, LTE connection dedicated to the corporate functions, the E102 router avoids resource and bandwidth competition with other household devices on the network. Coupled with the high-speed connection and extension of company configurations through NetCloud, this extends an office-based environment to a secure network in a home, a remote office, or on the road. Additionally, this capability permits completely segmenting and isolating work devices — computers, printers, and more — from all other streaming and digital work in the household — ensuring high performance for key applications and providing a natural layer of information protection.

Notable Features

- Extend office networking capabilities to critical remote employees without compromising security or reliability.
- Access the network or applications with an embedded LTE modem for fast, secure connectivity in the home, vacation home, or on the road.
- Integrate into your existing network with standards-based, dynamic routing, traffic-shaping and VPN tunnel support.
- Define policies through centralized, cloud-based management for easy deployment at scale.
- Use zero-touch deployment with pre-configured router and pre-inserted SIM to speed installation.
- Segment and isolate work devices — computers, printers, and more — from household network and devices.
- Expand working radius with secure, enterprise class Wi-Fi.

[Quick Start Guide](#)

Key Software Capabilities

Cradlepoint NetCloud Service with the E102 Series Router provides everything needed to connect the remote worker to their corporate applications and services they need most from virtually any location. The NetCloud Service includes cloud-based management for optimizing routing, VPN, SD-WAN, and security capabilities. The cloud capabilities include defining and applying policies, at-a-glance status insights, reports, troubleshooting, and analytics dashboards. The service includes a warranty for as long as there is an active subscription on the router, online training, live and online support, and all software and firmware updates.

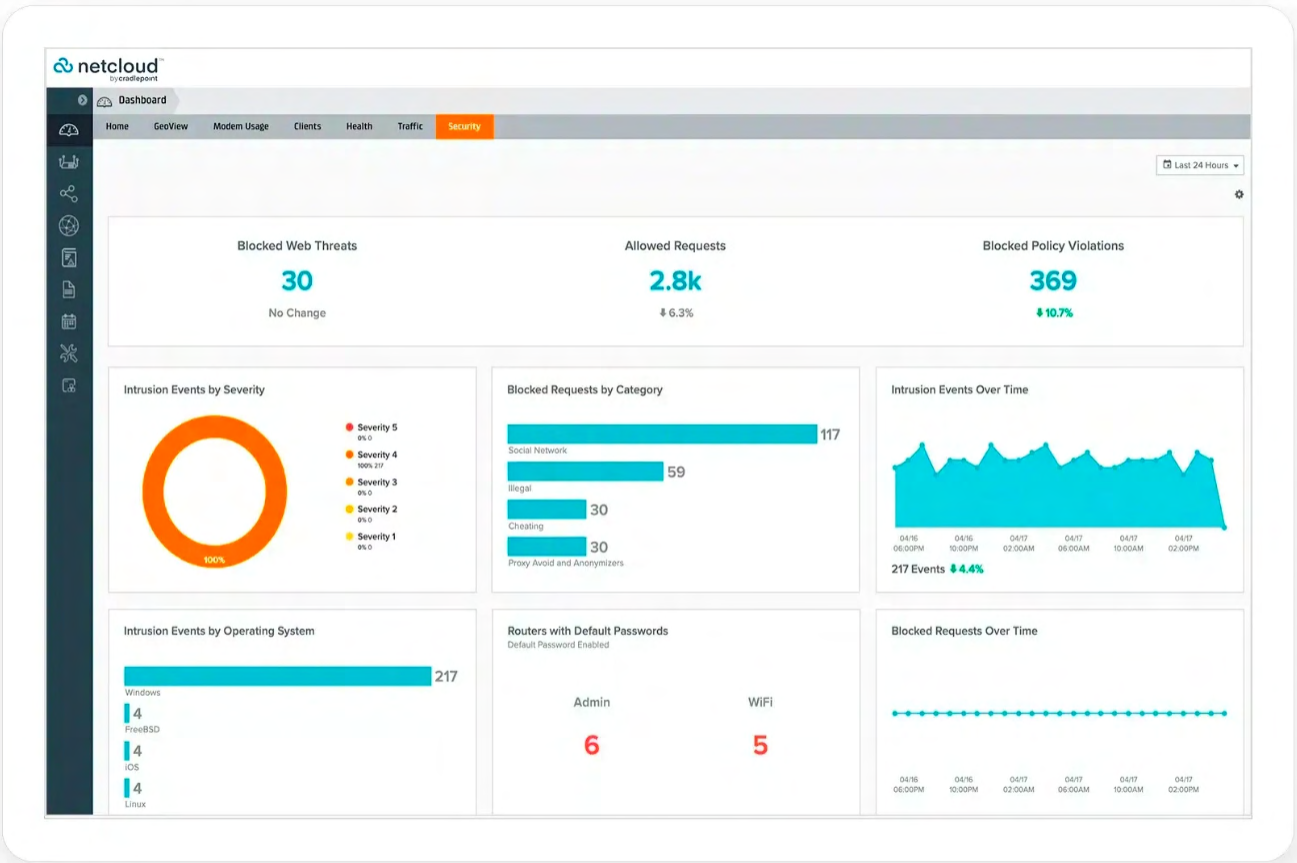

Deployment Capabilities

Zero-touch deployment features allow pre-configured and pre-activated equipment to arrive on location so the employee is able to power up the E102 router, locate the best cellular connection path, and instantly setup the pre-established office parameters through the NetCloud Service, upon authentication.

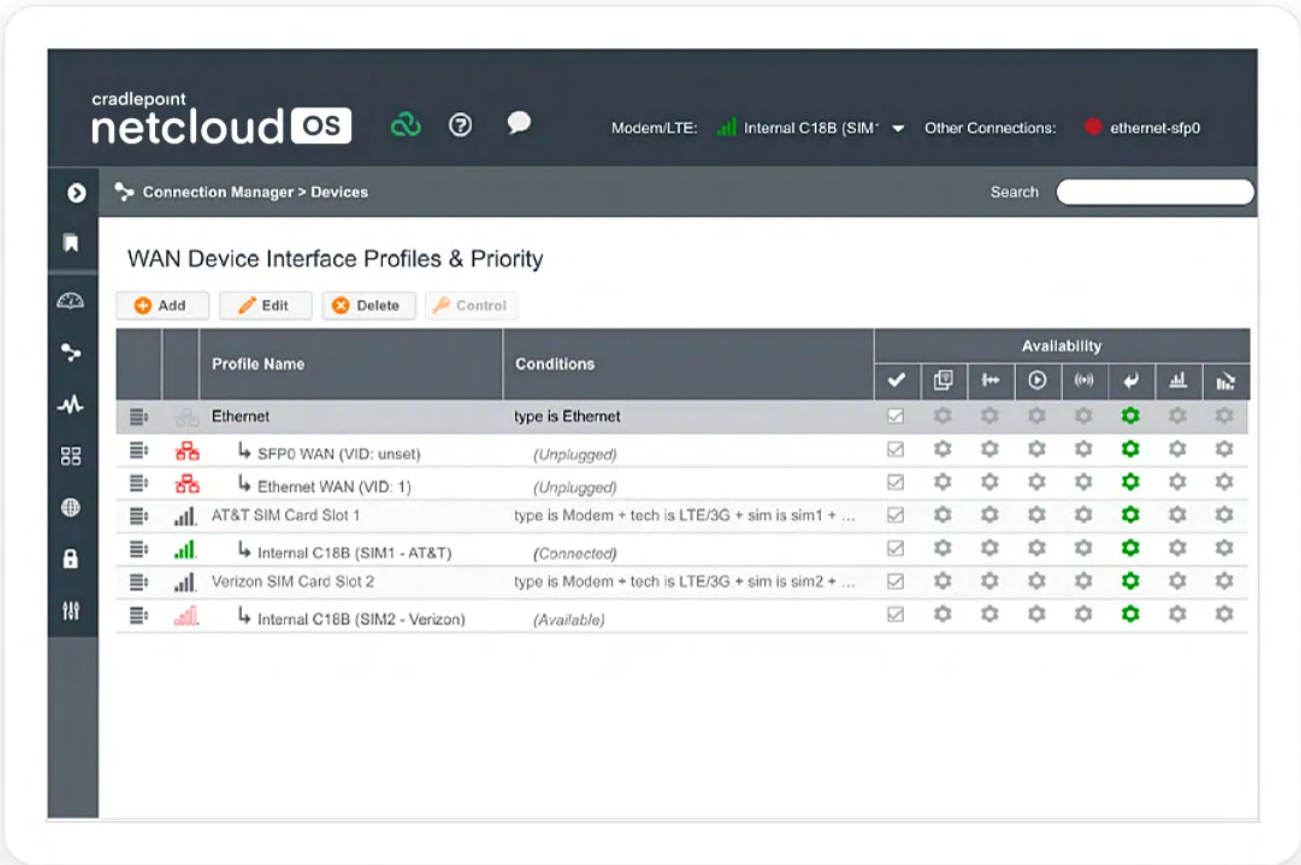

Security Services

NetCloud Service includes Unified Edge security features and options to optimize the E102 router to meet and scale to the security needs of distributed environments. The service includes stateful zone-based and application-aware firewall, unified threat management, and authenticated wireless connection that is fully isolated from the surrounding networks.

Cloud Services

NetCloud Manager delivers true zero-touch deployment with the ability to define and deliver policy across entire groups of endpoints. Users can create a cloud-orchestrated hub and spoke VPN network and gain insights and analytics required for rapid troubleshooting and diagnostic workflows.

Performance testing conducted based on requirements as defined in RFC2544 using fixed-frame 1518 byte packets. Throughput results reflect uni-directional UDP traffic with less than 1% packet loss as tested with wired connections. Results do not reflect performance of the cellular wireless operator networks.
